

PRODUCT UPDATE · FOR CLIENT REVIEW

Advance Deposit Tracker

Release Notes — July 2026

Everything delivered in the 9–11 July 2026 update cycle,
in plain language — what changed, why, and what to expect

Document type: Release Notes

Version 1.1 · 11 July 2026

Covers production releases of 9–11 July 2026

Companion documents: "Formula & Calculation Reference" (v2.3)

1 Cost of Fund — your confirmed rule, live 10 JUL

The Cost of Fund calculation now follows the rule confirmed with you, verified against all 534 rows of your own analysis sheet:

- **Zero within grace.** Nothing is charged while a shipment stays within the 10-day grace window after its Estimated ETD.
- **Retroactive once grace is exceeded.** The moment the grace period is missed, the charge counts from the Estimated ETD itself (the full delay, not just the days past grace).
- **Early shipment = notional gain.** Shipping before the Estimated ETD shows a negative amount, exactly as in your sheet.
- **12% per annum**, matching your sheet (previously 18%). Both the rate and the grace days remain admin-configurable.
- Unshipped orders accrue day by day once past grace, so exposure stays visible and current.

One deliberate difference from your sheet: shipments arriving within grace show 0 in the system, whereas the sheet charges them a small amount. This follows the rule you confirmed on 10 July. All historical records were recalculated under the new rule.

Recording the Ship Date — stopping the charge 10 JUL

Payment is processed (and the record locked) long before goods actually ship — previously that meant nobody could enter the real ship date, so the Cost of Fund kept accruing forever. Now:

- The **Ship Date has its own dedicated box** on the payment page that stays open **even after the record is locked**.
- **Super Admin, Finance Admin and Accounts Team** can enter — or correct — it at any time. Every entry is written to the audit trail with the old and new value and who made it.
- The moment the date is saved, the Cost of Fund freezes at that date (or becomes a notional gain if the date beat the Estimated ETD).
- Finance Admins can now open the payment detail page (read-only apart from the Ship Date), reaching it through the Analytics screens.

Shown in the transaction's own currency 10 JUL

A EUR request's Cost of Fund now displays as €..., a CNY request's as ¥... — matching its deposit, everywhere a per-request figure appears. (The amount was always computed correctly in the request's currency; only the symbol was previously shown as \$.) Company-wide "Total Cost of Fund" tiles still sum all currencies together and are indicative — the per-currency views remain the authoritative monetary breakdowns.

2 Finding requests — search, sort & the invoice number 10-11 JUL

Search on every request list

A search box now sits above the tables on the Merchandiser “My Requests” page, the Accounts payment queue (serving the Pending / On Hold / All tabs), the HoM approval queue, the Admin Overview table, the User Management page, and the analytics drill-down views. One box matches:

- Request # (ADT-...)
- Sunshine Invoice #
- Supplier Invoice #
- Supplier name
- Customer name

Results narrow as you type; the × clears back to the full list.

Sort options

Next to each search box: **Newest first · Oldest first · Largest amount first · Smallest amount first**. Sorting is correct across pages on the large lists. The accounts *Pending* queue keeps its “oldest first — process in order” discipline until someone actively chooses a different order.

Sunshine Invoice # as the visible number

All request list tables now show the **Sunshine Invoice #** as the identifying number once Accounts enters it. Until then the internal request number (ADT-YYYY-NNNNN) stands in, so no row is ever blank. The ADT number remains the permanent reference on detail pages, audit logs, notifications and report exports — and the search box finds a request by either number.

Invoice number corrections — Super Admin only, fully tracked 11 JUL

Because the invoice number is now the visible identifier, changing it after a request exists is a controlled action:

- **Only a Super Admin can update** the Sunshine Invoice # or Supplier Invoice # on an existing request — every other role is refused by the system itself, not just the screen. Entering the numbers when a request is first created is unchanged.
- A dedicated “**Invoice Numbers**” panel on the request's payment page (visible to Super Admins only) is where corrections are made — it works even on locked, processed records.
- **Every change is written to the audit log** showing the old value, the new value, who made the change and when — visible under Admin → Audit Logs and included in the audit CSV export.

3 Dashboards — drill-down from the numbers 11 JUL

On the Admin Overview, the headline cards are now clickable:

Card	Clicking it opens
Total Requests	The full All Requests table (searchable, sortable, filterable by status)
Active Users	User Management, now with its own search (name / email / role)
Overdue Shipments	The list of exactly those overdue requests, with search

4 Notifications & mobile 10 JUL

- **Payment notifications with the TT copy.** When Accounts processes a payment and uploads the bank's TT copy, the requesting merchandiser is notified instantly — in-app bell and a push notification on their phone — with the document link attached. A fallback notice goes out if the TT copy hasn't been uploaded within an hour of processing.
- **Full notifications page.** The bell's quick view now opens into a dedicated page listing every notification with paging, unread indicators, TT-copy links and mark-all-read.
- **Push opt-in.** After signing in, every user is invited once to enable push notifications; a small reminder appears later for those who skipped it, and it can always be turned on from Settings.
- **Mobile app polish.** On phones with the app installed, the page header no longer sits under the phone's clock/status bar, and the notification panel no longer overflows the screen edge.

5 Data privacy — analytics scoped by role 11 JUL

A review found that two analytics views — the month-on-month trend charts and the shipment KPIs — showed **company-wide** figures to merchandisers. This is fixed: **merchandisers now see only their own requests** in every analytics number, chart and trend, consistent with the rest of the system. Admin, Finance and Accounts views are unchanged (still company-wide). Access to the specialised analytics tabs remains controlled per role from Admin → Analytics Access.

6 Release summary

Date	Change
9 Jul 2026	Payment notifications with TT copy link (bell + push); Settings page with font size & push toggle
10 Jul 2026	Cost of Fund aligned to your sheet (12%, from Estimated ETD, signed) and grace rule applied (zero within grace, retroactive past it); all historical records recalculated
10 Jul 2026	Mobile status-bar fix; full notifications page; push opt-in prompt
10 Jul 2026	Ship Date recordable after payment lock (Super Admin / Finance Admin / Accounts) — stops Cost of Fund; audited
10 Jul 2026	Cost of Fund displayed in each request's own currency
10 Jul 2026	Search on all request lists; Sunshine Invoice # shown as the list identifier (ADT number as fallback)
11 Jul 2026	Sort options (newest / oldest / largest / smallest amount); Admin Overview cards drill into searchable lists; search on User Management and analytics drill-downs
11 Jul 2026	Privacy fix: merchandiser analytics scoped to their own requests only
11 Jul 2026	Invoice number updates restricted to Super Admin, with old → new values recorded in the audit log

Advance Deposit Tracker — Release Notes · v1.1 · 11 July 2026 · Companion document: “Advance Deposit Tracker — Formula & Calculation Reference” (v2.3), which specifies every formula in the system for line-by-line confirmation.
